

* Ok, we fibbed a little.
Cityworks has served utilities
and telcos for
20 years!

UTILITIES & TELCOS

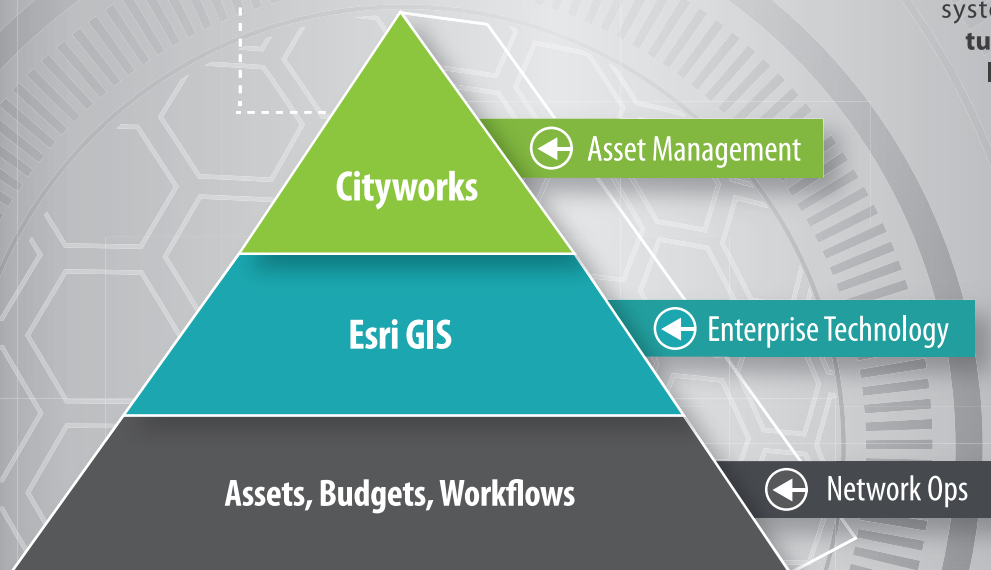

ENTERPRISE ASSET MANAGEMENT

As a utility or telecommunications professional, you balance a lot. You manage assets, service requests, inspections and work orders. You report in near real time on everything from budget to field conditions, so you stay prepared for the future. And you face critical compliance standards in the meantime. **What if there were a system that managed all your assets, integrated with GIS, and also helped simplify finances?**

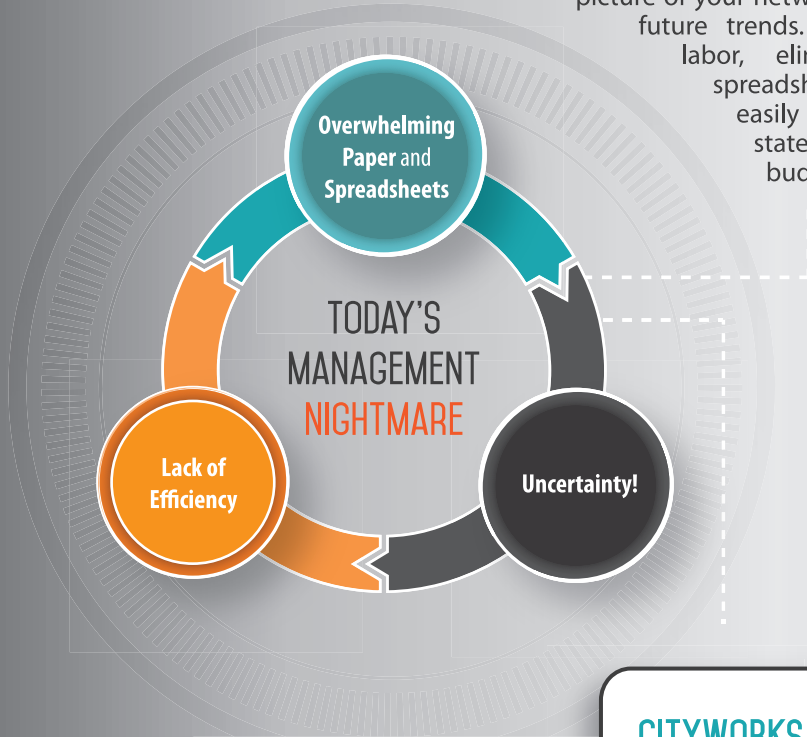

CENTRALIZE WITH CITYWORKS

Cityworks sits **on top of your geodatabase**. This approach creates a spatially enabled picture of your assets along with finances and workflows. Unlike external asset management systems, **Cityworks is a turnkey solution** built to leverage the value of your existing network data.

WHY CITYWORKS FOR UTILITIES AND TELCOS?

Network operators from coast to coast are increasingly choosing Cityworks for their asset management system. That's because Cityworks bolts onto the enterprise GIS you already use and love. Cityworks centralizes work, budgeting, predictive analysis, reporting, and cyclical maintenance planning while leveraging your existing investment in GIS. It ties your work activities to your asset locations, so you get the full picture of your network health, costs, and future trends. You cut redundant labor, eliminate paper and spreadsheet nightmares, and easily report on the current state of your assets and budget.

KNOWS YOUR WORKFLOWS?	✓	✗
BASED ON GIS?	✓	✗
HELPS YOU MEET REGULATORY NEEDS?	✓	✗

WHY SSP?

SSP combines our years of GIS and utility / telco consulting experience with the Cityworks asset-management platform. This unique combination drives greater efficiencies across your entire business. It makes spatially enabled asset management quick, easy and affordable.

TOP TEN REASONS UTILITIES & TELCOS SELECT CITYWORKS

- ASSETS**
Know asset conditions. Estimate their values.
- MATERIALS**
Compare inventory levels against jobs.
- WORKFLOWS**
Digitize and standardize information-gathering.
- FINANCES**
Gain visibility into real-time work performed, budget spent.
- DOCUMENTS**
Tie related documents (e.g., permits) to work.
- PREDICTIVE ANALYSIS**
Build a full health history of your network for proactive work.
- INSPECTIONS**
Use out-of-the-box templates to plan targeted and cyclical inspections.
- INTEGRATE**
Cityworks is accessible, so all departments can retrieve information.
- QUALITY**
Ensure data integrity while cutting manual and redundant labor.
- MOBILITY**
Work in the field with out-of-the box iOS & Android apps.
